

Furniture, Finishing Works, Supplies & Service Marketplace

Development Documentation v1.0

Project type: Web marketplace, PWA, Telegram Mini App-compatible platform

Target market: Ethiopia first, then East Africa

Primary users: Furniture buyers, furniture sellers, manufacturers, importers, interior designers, finishing workers, contractors, suppliers, construction material vendors, platform admins

Recommended MVP stack: PHP/Laravel + MySQL + Bootstrap/Tailwind + JavaScript

Future scale stack: Laravel API or Node.js API + React/Next.js frontend + PostgreSQL/MySQL + object storage + CDN

1. Product Vision

The platform is a specialized marketplace like Jiji or ZemenGebeya, but focused only on:

1. Furniture products
2. Home decor
3. Interior design
4. Finishing works
5. Construction finishing services
6. Furniture manufacturing supplies
7. Wood, MDF, plywood, hardware, accessories, and related materials
8. Verified service providers such as carpenters, electricians, plumbers, gypsum workers, painters, and installers

The platform should help customers discover products and services by **location, price, quality, rating, availability, promotions, and video content**.

The long-term vision is to become the trusted digital marketplace for home, furniture, finishing, construction interior, and furnishing industries in Ethiopia.

2. Core Business Goals

The platform must achieve these goals:

1. Help customers easily find trusted furniture, decor, supplies, and finishing service providers.
2. Help sellers and service providers get leads, calls, messages, orders, and visibility.

3. Generate revenue through ads, featured listings, subscriptions, commissions, lead fees, and promoted video posts.
 4. Support verified businesses and reduce fake sellers.
 5. Support rich media: product images, short videos, AR furniture preview, and portfolio galleries.
 6. Work on shared hosting at MVP stage.
 7. Later scale into mobile apps, native video hosting, advanced AR, logistics, payment integration, and AI recommendations.
-

3. Platform Types

The same system should support four access modes.

3.1 Website

Main public marketplace available through a normal domain.

Example:

```
https://yourmarketplace.com
```

3.2 PWA App

The website should be installable like an app. For installable PWA behavior, the app needs a web app manifest, icons, start URL, display settings, and HTTPS. Chromium-based browsers require manifest members such as `name` or `short_name`, 192px and 512px icons, `start_url`, and `display / display_override`; HTTPS is also required for installability outside localhost.

3.3 Telegram Mini App

The same web app should be able to open inside Telegram using Telegram Mini Apps. Telegram Mini Apps are JavaScript-based web interfaces launched inside Telegram, and they support features such as seamless authorization, payments through third-party payment providers, push notifications, full-screen mode, home screen shortcuts, geolocation, and other Telegram WebApp capabilities.

3.4 Future Native App

Later, the same backend API can support Android and iOS apps.

4. User Roles

4.1 Guest User

A guest can:

1. Browse listings.
2. Search products and services.
3. View videos.
4. View product details.
5. View seller profile.
6. View phone number, depending on platform rules.
7. Send inquiry after login or with phone verification.
8. Use AR preview for supported products.

4.2 Customer / Buyer

A buyer can:

1. Create account.
2. Save products.
3. Contact sellers.
4. Request quotes.
5. Follow vendors.
6. Review completed purchases or services.
7. Report fake or unethical listings.
8. Track inquiries and orders.
9. Browse video shopping feed.
10. View furniture in AR where available.

4.3 Furniture Seller

A seller can:

1. Register business.
2. Upload products.
3. Manage inventory.
4. Add prices, discounts, and locations.
5. Upload product images.
6. Add TikTok or YouTube Shorts video links.
7. Link videos to products.
8. Promote listings.
9. Receive inquiries.
10. Respond to customer messages.
11. View analytics.

4.4 Manufacturer

A manufacturer can:

1. Upload custom furniture products.
2. Show production capacity.
3. Add made-to-order items.
4. Add estimated delivery time.
5. Add workshop location.
6. Add product customization options.
7. Upload portfolio.
8. Receive bulk order inquiries.

4.5 Importer

An importer can:

1. List imported furniture or decor.
2. Add origin country.
3. Add stock availability.
4. Add warranty information.
5. Promote premium products.

4.6 Service Provider

Service providers include:

1. Interior designers
2. Contractors
3. Electricians
4. Plumbers
5. Gypsum workers
6. Painters
7. Installers
8. Carpenters
9. Flooring workers
10. Curtain/blinds installers
11. Kitchen cabinet installers
12. Finishing consultants

They can:

1. Create service profile.
2. Add portfolio images.
3. Add service areas.
4. Add service categories.
5. Add price range.

6. Receive quote requests.
7. Upload short videos.
8. Link videos to services.
9. Receive ratings and reviews.

4.7 Supply Vendor

Supply vendors include:

1. MDF suppliers
2. Plywood suppliers
3. Wood sellers
4. Furniture accessories sellers
5. Hinges, handles, screws, glue, paint vendors
6. Construction finishing material vendors
7. Tools and machinery sellers

They can:

1. Upload supply products.
2. Add wholesale/retail pricing.
3. Add unit of measurement.
4. Add stock availability.
5. Add delivery availability.
6. Add videos.
7. Promote products by location and category.

4.8 Admin

Admin can:

1. Manage users.
2. Verify businesses.
3. Approve or reject listings.
4. Moderate videos.
5. Manage categories.
6. Manage ads and promotions.
7. Manage reports and complaints.
8. View analytics.
9. Manage subscription plans.
10. Manage locations.
11. Manage homepage banners.
12. Manage featured listings.
13. Suspend unethical or fake businesses.

4.9 Super Admin

Super Admin has full system access:

1. System settings.
 2. Payment settings.
 3. Commission rules.
 4. User roles.
 5. Database backups.
 6. Security controls.
 7. Platform financial reports.
 8. Admin user management.
-

5. Main Modules

5.1 Authentication Module

Required features:

1. Register with phone number.
2. Register with email.
3. Login with phone/email and password.
4. OTP verification by SMS.
5. Password reset.
6. Role-based account type selection.
7. Optional Google login later.
8. Optional Telegram login for Mini App users.
9. Optional Fayda/National ID verification later.

Recommended user statuses:

```
pending
active
suspended
banned
deleted
```

Recommended account types:

```
customer
seller
manufacturer
importer
```

```
service_provider  
supplier  
admin  
super_admin
```

5.2 Business Verification Module

Verification is important because the marketplace must be trusted.

Verification levels:

```
unverified  
phone_verified  
document_verified  
location_verified  
premium_verified
```

Verification documents may include:

1. Business license
2. TIN number
3. Fayda/National ID for individual sellers
4. Shop/workshop photo
5. Physical address
6. Google Map location
7. Phone number
8. Bank account name
9. Social media page links
10. Previous work portfolio

Admin verification workflow:

```
Business submits verification request  
Admin reviews submitted data  
Admin approves/rejects/request changes  
Business gets verified badge after approval
```

Verification benefits:

1. Higher ranking.
2. Verified badge.
3. More customer trust.
4. Eligibility for promoted listings.

5. Eligibility for video feed promotion.
 6. Eligibility for AR-supported product listing.
-

5.3 Product Marketplace Module

Product types:

```
ready_made
custom_made
imported
used
made_to_order
supply_material
decor
tool
machine
```

Product categories:

1. Sofa
2. Bed
3. Dining table
4. Chair
5. Office furniture
6. Kitchen cabinet
7. Wardrobe
8. TV stand
9. Door
10. Wall panel
11. Decor
12. Lighting
13. Curtain
14. MDF
15. Plywood
16. Solid wood
17. Hardware/accessories
18. Paint/finishing materials
19. Tools
20. Machinery

Product fields:

```
id
business_id
```

```
category_id
subcategory_id
title
slug
description
product_type
condition
price
discount_price
currency
is_negotiable
stock_quantity
minimum_order_quantity
unit
material
brand
color
dimensions
weight
warranty
delivery_available
installation_available
customization_available
location_city
location_subcity
latitude
longitude
status
is_featured
is_promoted
views_count
favorites_count
inquiries_count
created_at
updated_at
```

Product status:

```
draft
pending_review
active
rejected
paused
sold_out
deleted
```

5.4 Service Marketplace Module

Service categories:

1. Interior design
2. Gypsum work
3. Painting
4. Electrical work
5. Plumbing
6. Flooring
7. Wall cladding
8. Kitchen cabinet installation
9. Furniture installation
10. Delivery
11. Maintenance
12. Renovation
13. Site supervision
14. Custom furniture design
15. Wood work
16. Metal work
17. Aluminum work
18. Glass work

Service provider profile fields:

```
id
business_id
service_category_id
title
slug
description
experience_years
price_type
starting_price
service_area_city
service_area_subcity
portfolio_count
rating_average
rating_count
verified_status
status
created_at
updated_at
```

Price types:

```
fixed
starting_from
per_square_meter
per_day
per_project
quote_required
```

Service request workflow:

```
Customer opens service profile
Customer clicks Request Quote
Customer fills project details
Service provider receives request
Provider responds with price/time
Customer accepts/rejects
After service completion customer reviews provider
```

5.5 Supply Marketplace Module

Supply products are different from furniture products because they may use units, bulk pricing, and stock movement.

Supply examples:

1. MDF board
2. Plywood
3. Solid wood
4. Veneer
5. Hinges
6. Handles
7. Screws
8. Glue
9. Paint
10. Foam
11. Fabric
12. Leather
13. Edgebanding
14. Machinery
15. Tools

Supply product fields:

```
id
business_id
category_id
name
description
brand
grade
size
thickness
unit_of_measurement
price_per_unit
bulk_price
minimum_order_quantity
stock_quantity
delivery_available
city
subcity
status
created_at
updated_at
```

Unit examples:

```
piece
sheet
meter
kg
liter
roll
set
box
bundle
```

6. Video Market / Shoppable Video Feed

This is one of the strongest features of the platform.

The marketplace should have a TikTok-like vertical video screen where customers can scroll through vendor videos and directly open the linked product, service, or supply listing.

Possible names:

Video Market
Shop Feed
FurniTok
Watch & Buy
Shop from Videos

6.1 Supported Video Sources for MVP

MVP should support:

1. TikTok video links
2. YouTube Shorts links
3. YouTube normal video links

For MVP, do not upload or host videos on your server. Use official embeds.

TikTok supports embedded videos on websites and also provides an oEmbed API that converts a TikTok video URL into embed code and video metadata. TikTok embedded videos link back to TikTok content, and deleted/removed TikTok videos become unavailable in embedded form too.

YouTube videos can be embedded using an iframe URL format like `https://www.youtube.com/embed/VIDEO_ID`, and the IFrame Player API can control playback when `enablejsapi=1` is used.

For mobile inline playback, YouTube supports the `playsinline=1` parameter for inline playback on iOS mobile browsers and supported WebViews.

6.2 Video Feed User Experience

The customer opens the video feed and sees:

1. Full-screen vertical video.
2. Vendor name.
3. Verified badge.
4. Product/service/supply title.
5. Price or "Request Quote".
6. Location.
7. Rating.
8. CTA button.
9. Save button.
10. Share button.
11. Report button.
12. "Visit Shop" button.

CTA examples:

Check Product
Request Quote
View Material
Visit Supplier
Book Service
Chat Seller
Call Now

CTA routing examples:

Furniture product → /products/modern-sofa-123
Service provider → /services/gypsum-ceiling-provider-88
Supply vendor → /supplies/mdf-18mm-456
Business profile → /businesses/abel-furniture

6.3 Vendor Video Upload Workflow

The vendor does not upload the video file in MVP. The vendor submits a video link.

Workflow:

Vendor Dashboard
→ Videos
→ Add Video
→ Select platform: TikTok / YouTube
→ Paste video link
→ Select linked item type: product / service / supply / business / portfolio / promotion
→ Select linked item
→ Add CTA label
→ Select target city/subcity
→ Submit for review
→ Admin approves
→ Video appears in feed

6.4 Video Moderation Rules

Admin must approve videos before they are visible.

Reject videos if:

1. Video does not match listing.

2. Misleading price.
3. Fake product.
4. Offensive content.
5. Political or unrelated content.
6. Adult content.
7. Harmful or unsafe claims.
8. Links to competitor marketplace.
9. Stolen content reported by owner.
10. Business is unverified for promoted video.

6.5 Video Ranking Logic

Video feed ranking should consider:

```
Video Score =  
location_match_score  
+ category_match_score  
+ seller_verification_score  
+ rating_score  
+ product_availability_score  
+ freshness_score  
+ engagement_score  
+ promotion_score  
- report_penalty  
- out_of_stock_penalty  
- rejected_history_penalty
```

Recommended ranking weight:

```
Location match: 25%  
Category match: 20%  
Engagement: 15%  
Verification: 15%  
Freshness: 10%  
Rating: 10%  
Promotion boost: 5%
```

6.6 Video Analytics

Track events:

```
view  
watch_3s  
watch_10s
```

```
watch_25_percent  
watch_50_percent  
watch_75_percent  
watch_complete  
cta_click  
profile_click  
share  
save  
report
```

Vendor dashboard should show:

1. Total views.
2. Watch time.
3. CTA clicks.
4. Product visits.
5. Inquiries from video.
6. Conversion rate.
7. Best-performing videos.
8. Promoted video spend.
9. Cost per click.
10. Cost per lead.

7. AR Furniture Preview Module

The AR module helps buyers preview furniture in their room.

7.1 MVP AR Strategy

For MVP, use web-based 3D product preview.

Supported product media:

```
normal_images  
360_images  
3d_model_glb  
3d_model_usdz  
ar_preview
```

A product with AR should have:

```
3D Preview
View in Room
Rotate
Zoom
Material selector
Color selector
Dimensions
```

WebXR brings augmented and virtual reality functionality to the web through the WebXR Device API.

7.2 AR Product Requirements

Each AR-supported product needs:

1. Optimized `.glb` model for Android/web.
2. Optional `.usdz` file for iOS AR Quick Look.
3. Product dimensions.
4. Real-world scale.
5. Texture compression.
6. Thumbnail image.
7. Fallback images for unsupported devices.

7.3 AR MVP Rule

Do not force all vendors to upload 3D models.

Instead:

1. Normal vendors upload images.
2. Premium vendors can request 3D model service.
3. Platform can offer paid “Create 3D Model” service.
4. AR listings get special badge and ranking boost.

8. Search and Filtering

8.1 Search Targets

Search must work across:

1. Products.
2. Businesses.
3. Services.
4. Supply materials.

- 5. Videos.
- 6. Categories.
- 7. Locations.

8.2 Search Filters

Product filters:

```
category
subcategory
price_min
price_max
city
subcity
condition
product_type
material
brand
color
delivery_available
installation_available
verified_seller
rating
discount
featured
newest
near_me
```

Service filters:

```
service_category
city
subcity
experience_years
rating
verified
price_type
available_today
portfolio_available
```

Supply filters:

```
category
unit
```

```
brand
thickness
size
city
subcity
stock_available
bulk_price
delivery_available
verified_supplier
```

8.3 Sorting Options

```
recommended
nearest
lowest_price
highest_price
newest
most_viewed
top_rated
most_inquired
featured_first
discount_first
```

8.4 Recommended Ranking Formula

```
Listing Score =
category_match
+ location_match
+ search_keyword_match
+ seller_verification
+ rating
+ listing_quality
+ freshness
+ availability
+ promotion_boost
- complaints
- rejected_history
- out_of_stock
```

9. Ads and Promotion Module

The platform should maximize revenue through different paid visibility options.

9.1 Promotion Types

```
homepage_banner  
category_featured  
city_featured  
subcity_featured  
search_top_result  
video_feed_boost  
business_profile_boost  
service_provider_boost  
supplier_boost  
urgent_sale_badge  
premium_verified_badge
```

9.2 Pricing Models

```
fixed_daily  
fixed_weekly  
fixed_monthly  
cost_per_click  
cost_per_lead  
subscription_plan  
commission_per_order
```

9.3 Ad Targeting

Ad campaigns can target:

```
city  
subcity  
category  
subcategory  
product_type  
user_interest  
search_keyword  
price_range  
business_type
```

9.4 Ad Controls

Admin should manage:

1. Ad approval.
 2. Campaign budget.
 3. Start/end date.
 4. Target category.
 5. Target location.
 6. Click tracking.
 7. Impression tracking.
 8. Lead tracking.
 9. Refund/credit adjustment.
 10. Suspicious click detection.
-

10. Messaging and Inquiry Module

10.1 Inquiry Types

```
product_inquiry
service_quote_request
supply_order_request
custom_order_request
bulk_purchase_request
delivery_request
installation_request
```

10.2 Inquiry Workflow

```
Customer opens listing
Customer clicks Call / Chat / Request Quote
System creates inquiry record
Vendor receives notification
Vendor responds
Customer can continue chat or call
Admin can track lead quality
```

10.3 Inquiry Fields

```
id
customer_id
```

```
business_id
listing_type
listing_id
inquiry_type
message
phone
preferred_contact_method
status
source
created_at
updated_at
```

Statuses:

```
new
seen
responded
negotiating
converted
closed
spam
```

Sources:

```
product_detail
video_feed
search_result
business_profile
featured_ad
telegram_mini_app
pwa
```

11. Order Module

For MVP, the platform can focus on leads and quote requests instead of full checkout.

Later, add order management.

11.1 MVP Order Style

MVP should support:

1. Inquiry.
2. Quote request.
3. Seller contact.
4. Manual payment outside platform.
5. Admin tracking of lead conversion.

11.2 Future Order Workflow

```
Customer adds product to cart
Customer selects delivery/install option
Customer chooses payment method
Order created
Seller confirms availability
Customer pays deposit/full amount
Seller prepares product
Delivery/install scheduled
Customer confirms receipt
Seller receives payout
Customer reviews seller
```

11.3 Order Status

```
pending
confirmed
deposit_paid
processing
ready_for_delivery
out_for_delivery
delivered
completed
cancelled
refunded
disputed
```

12. Payments Module

12.1 MVP Payment Strategy

At MVP, payment can be manual:

1. Bank transfer.
2. Cash on delivery.
3. Telebirr manual confirmation.
4. CBE Birr manual confirmation.
5. Admin/seller confirms payment.

12.2 Future Payment Integration

Future integrations may include:

1. Telebirr.
2. CBE Birr.
3. Chapa.
4. SantimPay.
5. Bank transfer automation.
6. Wallet balance.
7. Escrow system.
8. Subscription auto-renewal.

12.3 Payment Records

```
id
payer_id
business_id
order_id
campaign_id
subscription_id
payment_type
amount
currency
payment_method
reference_number
proof_image
status
confirmed_by
created_at
updated_at
```

Payment types:

```
order_payment
ad_payment
subscription_payment
featured_listing_payment
commission_payment
refund
wallet_topup
```

13. Reviews and Ratings

13.1 Review Types

```
product_review
business_review
service_review
supplier_review
delivery_review
```

13.2 Review Rules

1. Only verified customers should leave reviews.
2. For MVP, allow review after inquiry but mark as “unverified purchase”.
3. Later, only completed orders can leave verified reviews.
4. Admin can remove abusive reviews.
5. Business can reply once.
6. Users can report fake reviews.

13.3 Review Fields

```
id
reviewer_id
business_id
listing_type
listing_id
order_id
rating
title
comment
images
is_verified_purchase
status
```

```
created_at
updated_at
```

Statuses:

```
pending
approved
rejected
hidden
reported
```

14. Location Module

Location is very important because listings should be prioritized by customer area.

14.1 Required Location Levels

```
country
region
city
subcity
woreda
area_name
latitude
longitude
```

Example:

```
Ethiopia
Addis Ababa
Bole
Wollo Sefer
8.991...
38.789...
```

14.2 Location-Based Features

1. Nearby listings.
2. Featured in city.
3. Featured in subcity.

4. Delivery availability.
 5. Service coverage area.
 6. Supplier coverage area.
 7. Local video feed.
 8. Local ads.
 9. Map view.
 10. "Available near me".
-

15. Notification Module

Notification channels:

```
in_app
email
sms
telegram
push_notification
whatsapp_later
```

Notification events:

```
new_inquiry
vendor_reply
quote_received
order_created
order_status_changed
payment_received
listing_approved
listing_rejected
verification_approved
verification_rejected
ad_campaign_started
ad_campaign_ended
subscription_expiring
review_received
report_received
```

16. Admin Panel

Admin panel is critical.

16.1 Admin Dashboard

Dashboard cards:

1. Total users.
2. Total businesses.
3. Pending businesses.
4. Active listings.
5. Pending listings.
6. Reported listings.
7. Total inquiries.
8. Revenue this month.
9. Active campaigns.
10. Top categories.
11. Top locations.
12. Top vendors.
13. Top videos.
14. Suspicious activities.

16.2 Admin Menus

Dashboard
Users
Businesses
Verification Requests
Products
Services
Supplies
Videos
Categories
Locations
Inquiries
Orders
Payments
Subscriptions
Ads & Promotions
Reviews
Reports & Complaints
Content Pages
Settings
Admins & Roles
Analytics
Backups

16.3 Admin Moderation

Admin should approve:

1. New business.
 2. Verification request.
 3. Product listing.
 4. Service listing.
 5. Supply listing.
 6. Video post.
 7. Promotion campaign.
 8. Review, if moderation is enabled.
-

17. Database Design

Below is a practical MySQL database structure for MVP.

17.1 users

```
CREATE TABLE users (  
  id BIGINT UNSIGNED AUTO_INCREMENT PRIMARY KEY,  
  full_name VARCHAR(150) NOT NULL,  
  phone VARCHAR(30) UNIQUE,  
  email VARCHAR(150) UNIQUE,  
  password VARCHAR(255) NOT NULL,  
  account_type  
  ENUM('customer', 'seller', 'manufacturer', 'importer', 'service_provider', 'supplier', 'admin', 'super_a  
  NOT NULL DEFAULT 'customer',  
  status ENUM('pending', 'active', 'suspended', 'banned', 'deleted') NOT NULL  
  DEFAULT 'pending',  
  phone_verified_at DATETIME NULL,  
  email_verified_at DATETIME NULL,  
  last_login_at DATETIME NULL,  
  created_at DATETIME DEFAULT CURRENT_TIMESTAMP,  
  updated_at DATETIME DEFAULT CURRENT_TIMESTAMP ON UPDATE CURRENT_TIMESTAMP  
);
```

17.2 businesses

```
CREATE TABLE businesses (  
  id BIGINT UNSIGNED AUTO_INCREMENT PRIMARY KEY,  
  user_id BIGINT UNSIGNED NOT NULL,
```

```

        business_name VARCHAR(200) NOT NULL,
        slug VARCHAR(220) UNIQUE NOT NULL,
        business_type
ENUM('seller','manufacturer','importer','service_provider','supplier','mixed')
NOT NULL,
        description TEXT NULL,
        phone VARCHAR(30),
        email VARCHAR(150),
        logo VARCHAR(255),
        cover_image VARCHAR(255),
        city VARCHAR(100),
        subcity VARCHAR(100),
        area_name VARCHAR(150),
        address TEXT,
        latitude DECIMAL(10,7) NULL,
        longitude DECIMAL(10,7) NULL,
        tin_number VARCHAR(100),
        license_number VARCHAR(100),
        verification_status
ENUM('unverified','phone_verified','document_verified','location_verified','premium_verified')
DEFAULT 'unverified',
        rating_average DECIMAL(3,2) DEFAULT 0,
        rating_count INT DEFAULT 0,
        status ENUM('pending','active','suspended','rejected','deleted') DEFAULT
'pending',
        created_at DATETIME DEFAULT CURRENT_TIMESTAMP,
        updated_at DATETIME DEFAULT CURRENT_TIMESTAMP ON UPDATE CURRENT_TIMESTAMP,
        FOREIGN KEY (user_id) REFERENCES users(id)
);

```

17.3 categories

```

CREATE TABLE categories (
    id BIGINT UNSIGNED AUTO_INCREMENT PRIMARY KEY,
    parent_id BIGINT UNSIGNED NULL,

18. API Documentation

18.1 Authentication APIs

```
POST /api/register
POST /api/login
POST /api/logout
POST /api/otp/send
POST /api/otp/verify
POST /api/password/forgot
POST /api/password/reset
GET /api/me
```

18.2 Business APIs

```
GET /api/businesses
POST /api/businesses
GET /api/businesses/{id}
PUT /api/businesses/{id}
DELETE /api/businesses/{id}
POST /api/businesses/{id}/verification
GET /api/businesses/{id}/analytics
```

18.3 Product APIs

```
GET /api/products
POST /api/products
GET /api/products/{id}
PUT /api/products/{id}
DELETE /api/products/{id}
POST /api/products/{id}/media
POST /api/products/{id}/favorite
POST /api/products/{id}/view
```

Example product search:

```
GET /api/products?
category=sofa&city=Addis%20Ababa&subcity=Bole&min_price=20000&max_price=80000&sort=nearest
```

18.4 Service APIs

```
GET    /api/services
POST   /api/services
GET    /api/services/{id}
PUT    /api/services/{id}
DELETE /api/services/{id}
POST   /api/services/{id}/portfolio
```

18.5 Supply APIs

```
GET    /api/supplies
POST   /api/supplies
GET    /api/supplies/{id}
PUT    /api/supplies/{id}
DELETE /api/supplies/{id}
```

18.6 Video APIs

```
GET    /api/videos/feed
POST   /api/videos
GET    /api/videos/{id}
PUT    /api/videos/{id}
DELETE /api/videos/{id}
POST   /api/videos/{id}/event
POST   /api/videos/{id}/report
```

Example video feed:

```
GET /api/videos/feed?city=Addis%20Ababa&category=sofa&page=1
```

Example video feed response:

```
{
  "data": [
    {
      "id": 15,
      "platform": "tiktok",
      "embed_html": "<blockquote class='tiktok-embed'>...</blockquote>",
      "thumbnail_url": "https://example.com/thumb.jpg",
      "business_name": "Abel Furniture",
    }
  ]
}
```

```

    "verified": true,
    "linked_type": "product",
    "linked_id": 88,
    "title": "Modern L-shape Sofa",
    "price": 45000,
    "location": "Bole, Addis Ababa",
    "cta_label": "Check Product",
    "cta_url": "/products/88"
  }
],
"pagination": {
  "current_page": 1,
  "next_page": 2
}
}

```

18.7 Inquiry APIs

```

POST /api/inquiries
GET /api/inquiries
GET /api/inquiries/{id}
PUT /api/inquiries/{id}/status

```

18.8 Review APIs

```

POST /api/reviews
GET /api/reviews?business_id=1
PUT /api/reviews/{id}
DELETE /api/reviews/{id}

```

18.9 Promotion APIs

```

GET /api/promotions
POST /api/promotions
GET /api/promotions/{id}
PUT /api/promotions/{id}
POST /api/promotions/{id}/pause
POST /api/promotions/{id}/resume

```

18.10 Admin APIs

```
GET /api/admin/dashboard
GET /api/admin/pending-businesses
POST /api/admin/businesses/{id}/approve
POST /api/admin/businesses/{id}/reject
GET /api/admin/pending-listings
POST /api/admin/products/{id}/approve
POST /api/admin/products/{id}/reject
POST /api/admin/videos/{id}/approve
POST /api/admin/videos/{id}/reject
GET /api/admin/reports
PUT /api/admin/reports/{id}
```

19. Frontend Pages

19.1 Public Pages

```

```

21. Shared Hosting MVP Architecture

Because you want the system to start on shared hosting, keep the first version simple.

21.1 Recommended MVP Stack

```
Backend: Laravel or plain PHP MVC
Database: MySQL
Frontend: Blade + Bootstrap/Tailwind + Alpine.js or jQuery
Admin: Blade templates
Media: Local public uploads
Video: TikTok/YouTube embeds only
```

AR: GLB/USDZ files uploaded to hosting if small
Queue: Cron jobs
Cache: File cache or database cache
Search: MySQL FULLTEXT first

21.2 Avoid in MVP

Avoid these on shared hosting:

1. Native video upload.
2. WebSocket chat.
3. Heavy real-time analytics.
4. Large 3D model hosting.
5. AI video processing.
6. Microservices.
7. Elasticsearch.
8. Complex recommendation engine.
9. High-volume push notifications.

21.3 Use Cron Jobs

Cron jobs should handle:

```
expire old promotions
check subscription expiry
clean temporary uploads
send scheduled notifications
recheck broken TikTok/YouTube links
generate daily analytics summary
```

Example cron endpoint:

```
https://yourdomain.com/cron/daily?secret=YOUR_SECRET
```

22. Security Requirements

22.1 Authentication Security

1. Hash passwords with bcrypt/argon2.
2. Enforce strong password rules.
3. Add OTP verification.

4. Add login attempt throttling.
5. Add session timeout.
6. Add admin 2FA later.
7. Use HTTPS only.

22.2 Authorization

Use role-based access control.

Example permissions:

```
customer.view_marketplace
customer.create_inquiry
vendor.create_product
vendor.manage_own_products
vendor.create_video
admin.approve_listing
admin.manage_users
super_admin.manage_settings
```

22.3 File Upload Security

1. Validate file type.
2. Validate file size.
3. Rename files.
4. Store outside executable paths if possible.
5. Do not allow PHP files in uploads.
6. Generate thumbnails.
7. Compress images.
8. Scan suspicious uploads later.

22.4 Content Security

1. Moderate listings.
 2. Moderate videos.
 3. Escape all user-generated content.
 4. Prevent XSS.
 5. Use CSRF protection.
 6. Use SQL prepared statements or ORM.
 7. Rate-limit forms.
 8. Add report button.
 9. Keep audit logs for admin actions.
-

23. Trust and Safety

The platform must reduce scams and fake listings.

23.1 Trust Features

1. Verified badge.
2. Phone verified badge.
3. Location verified badge.
4. Business license verified badge.
5. Rating and reviews.
6. Report listing.
7. Admin moderation.
8. Seller response rate.
9. Seller joined date.
10. Completed order count later.

23.2 Risky Listing Detection

Flag listings when:

1. Price is too low.
 2. Duplicate image is used many times.
 3. New seller uploads too many products.
 4. Many users report the listing.
 5. Phone number appears in banned accounts.
 6. Description contains suspicious links.
 7. Product category does not match video.
 8. Same product is posted repeatedly.
-

24. Analytics

24.1 Platform Analytics

Track:

1. Daily active users.
2. New users.
3. New businesses.
4. New listings.
5. Active listings.
6. Searches.
7. Top categories.

8. Top locations.
9. Total inquiries.
10. Conversion rate.
11. Ad revenue.
12. Subscription revenue.
13. Top vendors.
14. Reported listings.
15. Video views.

24.2 Vendor Analytics

Vendor sees:

1. Product views.
 2. Inquiry count.
 3. Video views.
 4. CTA clicks.
 5. Search appearances.
 6. Top products.
 7. Customer locations.
 8. Promotion performance.
 9. Rating summary.
-

25. SEO Requirements

Public marketplace pages should be SEO-friendly.

25.1 SEO Pages

1. Product detail pages.
2. Service profile pages.
3. Supply detail pages.
4. Business profile pages.
5. Category pages.
6. City pages.
7. Blog/guide pages.

25.2 SEO URL Examples

```
/products/modern-l-shape-sofa-addis-ababa-123  
/services/interior-designer-bole-addis-ababa-88  
/supplies/mdf-board-18mm-addis-ababa-456
```

```
/businesses/abel-furniture  
/category/sofas/addis-ababa
```

25.3 SEO Fields

```
meta_title  
meta_description  
slug  
canonical_url  
og_image  
structured_data_json
```

26. Monetization Plan

26.1 Revenue Streams

1. Vendor subscription.
2. Featured product.
3. Featured service.
4. Featured supplier.
5. Video feed boost.
6. Homepage banner.
7. Category banner.
8. City/subcity featured placement.
9. Pay per inquiry.
10. Pay per click.
11. Commission per order.
12. Verification fee.
13. 3D/AR model creation service.
14. Photography service for vendors.
15. Premium business profile.
16. SMS notification packages.
17. Delivery partnership commission.

26.2 Subscription Plans

Example plans:

Free Plan

```
5 listings  
No featured listing
```

Limited analytics
No video promotion
Basic profile

Basic Plan

25 listings
5 videos
Basic analytics
Phone verified badge
Limited promotion access

Pro Plan

100 listings
Unlimited videos
Advanced analytics
Featured profile option
Video boost access
Priority support

Premium Plan

Unlimited listings
Premium verified badge
Top ranking boost
AR product support
Homepage campaign discount
Dedicated support

27. MVP Scope

27.1 Must-Have MVP Features

Build these first:

1. User registration/login.
2. Business registration.
3. Admin approval.
4. Product listing.
5. Service listing.

6. Supply listing.
7. Search and filters.
8. Product detail page.
9. Business profile page.
10. Inquiry/request quote form.
11. TikTok/YouTube video link submission.
12. Video feed with CTA.
13. Admin video moderation.
14. Featured listings.
15. Basic promotion package.
16. Reviews and ratings.
17. Report listing.
18. PWA manifest.
19. Basic Telegram Mini App compatibility.
20. Admin dashboard.

27.2 Not Required in MVP

Do not build these first:

1. Native video upload.
 2. Complex checkout.
 3. Escrow payment.
 4. Delivery tracking.
 5. Native mobile app.
 6. Advanced AI recommendation.
 7. Full AR for all products.
 8. Real-time chat with WebSockets.
 9. Multi-country support.
 10. Complex warehouse/inventory system.
-

28. Development Phases

Phase 1 — Marketplace MVP

Goal: launch usable marketplace.

Features:

1. Auth.
2. Business profiles.
3. Products.
4. Services.
5. Supplies.
6. Search.

7. Inquiry.
8. Admin moderation.
9. Basic ads.
10. PWA install.

Phase 2 — Video Commerce

Goal: increase engagement and vendor visibility.

Features:

1. TikTok links.
2. YouTube Shorts links.
3. Video feed.
4. CTA to listing.
5. Video analytics.
6. Promoted videos.
7. Admin video moderation.

Phase 3 — Trust and Monetization

Goal: make revenue and build trust.

Features:

1. Verification.
2. Subscriptions.
3. Featured listings.
4. Pay-per-lead.
5. Vendor analytics.
6. Review improvements.
7. Abuse detection.

Phase 4 — AR and Premium Seller Tools

Goal: premium furniture shopping experience.

Features:

1. 3D model upload.
2. View in room.
3. AR badge.
4. 3D model service.
5. Color/material variants.
6. Premium product pages.

Phase 5 — Orders and Payments

Goal: move from lead marketplace to transaction marketplace.

Features:

1. Cart.
2. Order.
3. Deposit.
4. Payment integration.
5. Delivery scheduling.
6. Order tracking.
7. Commission.

Phase 6 — Scale

Goal: move beyond shared hosting.

Features:

1. VPS/cloud hosting.
 2. Object storage.
 3. CDN.
 4. Queue workers.
 5. Native video upload.
 6. AI tagging.
 7. Recommendation engine.
 8. Mobile apps.
 9. Advanced analytics.
-

29. Testing Requirements

29.1 Functional Testing

Test:

1. User registration.
2. Login.
3. Business creation.
4. Product creation.
5. Product approval.
6. Product search.
7. Inquiry submission.
8. Video link submission.

9. Video approval.
10. CTA click.
11. Promotion purchase.
12. Review submission.
13. Report listing.
14. Admin actions.

29.2 Security Testing

Test:

1. SQL injection.
2. XSS.
3. CSRF.
4. Unauthorized dashboard access.
5. File upload attack.
6. Admin route access.
7. Password reset abuse.
8. OTP brute force.
9. Spam inquiries.
10. Fake video links.

29.3 Performance Testing

Test:

1. Homepage load speed.
2. Search speed.
3. Product image loading.
4. Video feed lazy loading.
5. Admin dashboard performance.
6. Large category pages.
7. Mobile performance.

30. Key Implementation Rules

1. Start simple.
2. Use official TikTok and YouTube embeds.
3. Do not host videos in MVP.
4. Lazy-load videos.
5. Moderate every listing at the beginning.
6. Verify sellers before giving them promotion power.
7. Use location heavily.
8. Make inquiry flow very easy.
9. Make vendor dashboard simple.

10. Build admin tools early.
 11. Track every lead source.
 12. Focus on Addis Ababa first.
 13. Add AR only for premium products at first.
 14. Make the site PWA-ready from day one.
 15. Keep the backend API clean so mobile apps can use it later.
-

31. Suggested MVP Build Order

Build in this order:

1. Database setup
2. Authentication
3. Roles and permissions
4. Admin dashboard base
5. Categories and locations
6. Business registration
7. Business approval
8. Product CRUD
9. Product approval
10. Public product browsing
11. Search and filters
12. Product detail page
13. Inquiry form
14. Vendor inquiry dashboard
15. Service module
16. Supply module
17. Reviews
18. Reports
19. Video link submission
20. Video feed
21. Video moderation
22. Promotions
23. PWA manifest
24. Telegram Mini App wrapper
25. Analytics dashboard
26. SEO improvements
27. Launch

32. Launch Checklist

Before launch:

Domain connected
SSL installed
Database migrated
Admin account created
Categories seeded
Locations seeded
Terms and privacy pages ready
SMS sender configured
Email sender configured
Image upload tested
Product approval tested
Inquiry tested
Video embed tested
PWA manifest tested
Mobile responsive tested
Admin moderation tested
Backup configured
Cron jobs configured
Error logging enabled
Analytics installed

33. Success Metrics

Track these after launch:

registered users
verified businesses
active listings
daily searches
product views
inquiries per day
inquiries per vendor
video views
video CTA clicks
promoted listing revenue
subscription revenue
top categories
top locations
reported listings
customer return rate
vendor retention

34. Final Technical Recommendation

For the first release, build this as:

```
Laravel + MySQL + Blade + Bootstrap/Tailwind + JavaScript
```

Use:

```
Official TikTok embeds  
Official YouTube embeds  
MySQL FULLTEXT search  
Local image uploads  
PWA manifest  
Telegram WebApp-compatible frontend  
Admin moderation  
Cron jobs
```

Then later upgrade to:

```
React/Next.js frontend  
API-first backend  
Cloud object storage  
CDN  
Native video hosting  
AI tagging  
Advanced recommendation  
Payment integration  
Native mobile apps
```

The best MVP strategy is not to copy Jiji fully at once. Start with a focused, trusted marketplace for **furniture, finishing works, supplies, and service providers**, then add video commerce, AR, ads, and payments step by step.
